

Velio is a unique product which combines light spot and air valve into one ceiling element so that it meets high requirements of architects for a simple uniform ceiling structure.

No matter, if there are big open space rooms or small one person rooms as a toilet. It is suitable for the office buildings, but also for the family houses. Velio fits perfect to each situation.

It can be used as a solo light, diffuser or combining both. As a result you can see less elements than it is usual.

VENTILATION & LIGHT
IN ONE

/ Body: \

- base for all multispot components
- has a nominal connection dimension for ducts with Ø 125 mm
- universal for all types of decorative panels

/ Deflector: \

- for passive cooling of the LED module
- made from innovative heat-conductive plastic, that have never been used in such a range before
- directs air flow
- it is registered for patent protection world wide

/ LED module: \

- provides good lighting for smaller rooms 1280 lm (3000 K) / 1340 lm (4000 K), equivalent of 100 W incandescent bulb
- minimum consumption for economical operation – 13.2 W
- lifetime of 50 000 operating hours
- two possibilities of colors of light: 3000 K (warm white) and 4000 K (neutral white)

/ Diffusion part: \

- with minimal light loss - made of plexiglass with highly diffuse additives
- dispersing the light so that it does not see the individual illuminating LED points

/ Air flow regulation: \

- adjustable continuously for 20 – 100 %
- with the indication of status of opening

/ Filter: \

- for fine air filtration
- to eliminate dusty ceilings and air ducts
- cleanable and also easily replaceable
- from polyurethane foam

/ Decorative Panel: \

- for soundless air supply / exhaust with volume airflow up to 70 m³/h
- made from UV-resistant material
- in three colour designs: white, black, anthracite
- with a timeless design designed by Michal Staško
